

AMENDMENT TO THE ABSTRACT

Insert the Abstract as follows

ABSTRACT

The thread of a tire designed more particularly to run on snowy, icy or wet surfaces. The tread comprises elements in relief, comprising at least one lateral face, at least one element in relief being provided with at least one incision defined along a mean plane, said tread comprising at least two lateral holes, oriented in a mean direction, passing through said element in relief and substantially parallel to the mean plane of incision. The holes open onto at least one lateral face of said element in relief and at least two lateral holes are situated on one and the same side of the mean plane of the incision.
